

Installing .NET Framework 4 Client Profile on SSIS Workstations

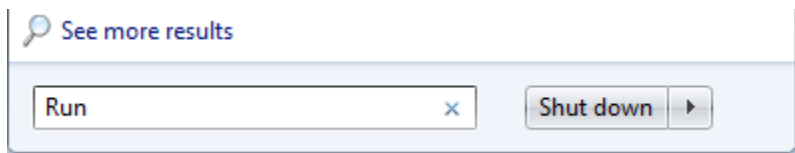

Purpose:

In order for SSIS Version 12.2 to launch and operate, each user workstation must have .NET Framework 4 Client Profile installed. SSIS Version 12.2 will be deployed statewide on May 29-30; agencies must ensure that .NET Framework 4 Client Profile is installed before the statewide release.

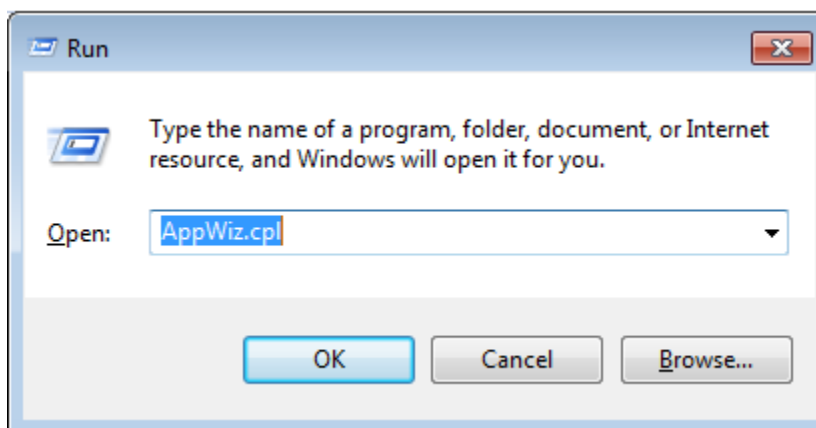

Verification of a .NET Framework 4 Client Profile Installation:

Follow these steps in order to verify whether or not a workstation already has .NET Framework 4 Client Profile installed:

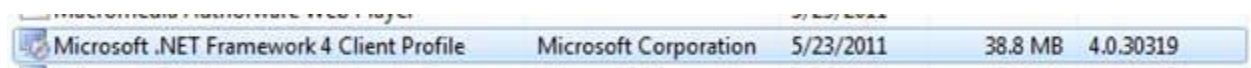

1. Click **Start**.

2. Select or Search for **Run**.
3. Enter **AppWiz.cpl** and click **OK**.

4. Verify that the **.NET Framework 4 Client Profile** is installed.

If the .NET Framework is not installed, follow the instructions below:

Choose one of these methods of installation for the Microsoft .NET Framework 4 Client Profile:

Option A

Web Installer 868 KB – This requires an Internet connection and will download as it installs. This installer is ideal for a small number of workstations.

<http://www.microsoft.com/download/en/details.aspx?id=17113>

1. Run the installer either through the web installer or from the location where you downloaded the installer.
2. Accept the license agreement and continue.
3. The Microsoft .NET Framework 4 Client Profile installer will inform you and should redirect you to any software that is required by Microsoft in order to complete the installation.

Option B

Standalone Installer 41.0 MB – This can be downloaded and put on a file share or burned to a CD. This is ideal for installing on multiple workstations.

<http://www.microsoft.com/download/en/details.aspx?id=24872>

1. Run the installer either through the web installer or from the location where you downloaded the installer.
2. Accept the license agreement and continue.
3. The Microsoft .NET Framework 4 Client Profile installer will inform you and should redirect you to any software that is required by Microsoft in order to complete the installation.

Citrix and Terminal Server Administrators:

Agencies running SSIS on Windows 2003-based Citrix or Terminal Servers need to install Windows Imaging Component before installing the .NET Framework 4 Client Profile. Here is a link to the Windows Imaging Component:

<http://www.microsoft.com/download/en/details.aspx?displaylang=en&id=32>

Agencies running SSIS on Windows 2003-based Citrix Servers need to install a Microsoft hotfix to resolve Microsoft knowledge base issue 955692. A link to request the hotfix download is on the knowledge base page:
